- TRISHTI
- ABHISHEK

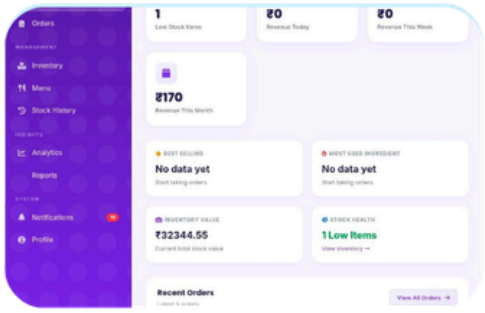

PROBLEM STATEMENT

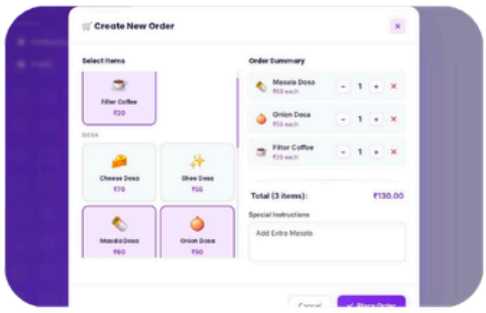

Traditional dosa vendors often face challenges in managing their daily inventory and tracking stock levels due to manual record-keeping methods. Lack of proper stock monitoring can lead to shortages of essential ingredients, over-purchasing, food wastage, and difficulty in managing daily operations.

SOLUTION

To address the challenges faced by traditional dosa vendors, a web-based digital management system has been developed. The platform allows customers to view the menu, place orders online, and receive order updates in real time. Vendors can efficiently manage orders, update menu items, monitor sales, and maintain customer records through a simple dashboard.

The system reduces manual work, minimizes order errors, improves service speed, and enhances customer satisfaction. It also provides digital records of transactions and sales, helping vendors make better business decisions and improve overall business performance.
